

# How Blancco's Erasure-as-a-Service (EaaS) Solution Can Help Data Centers Guarantee Data Sanitization While Increasing Efficiency

Data centers run on efficiency—but data security is something that can't be overlooked. Whether you're an enterprise that owns your own data centers, a managed service provider that provides data center services to clients or an ITAD that does the same, Blancco can help you guarantee data sanitization across servers, VMs, loose drives and other data center storage solutions. With Blancco's Erasure-as-a-Service (EaaS) solution, you can standardize the data sanitization process to increase efficiency and flexibility, mitigate risk, meet compliance requirements and reduce TCO when it comes time to reallocate, resell, return or recycle these assets.

Blancco's data erasure solutions can be used by tier one through tier four data centers in the following situations:

- Decommissioning servers in-rack
- Decommissioning full server arrays
- Technology upgrade projects
- Data center moves
- Avoiding NRD (Non-Return-Disk) fees, in case of break-fix disk replacement
- Data migration projects

Blanco's EaaS solution offers key benefits across every step of the erasure process.

### Deploy

- Deploy software via Windows PE, WIM installment, MSI, PXE boot, CD or USB.
- Employ organization-specific erasure policies via our configurable software.
- Access and automatically deploy erasure software across multiple locations from a centralized management console, or use hardware to deploy simultaneous erasures onsite in your secure facility.
- Experience easy integration with Active Directory and existing ticketing systems and asset management systems.

### Perform

- Perform API-driven erasure and reporting operations.
- Customize workflows for different types of technologies.
- Streamline data erasure regardless of operating system or manufacturer.
- Choose from 22 erasure standards to meet internal and external data sanitization requirements.
- Erase a wide range of data storage devices, from loose drives, storage arrays, servers in-rack, to VMs and files.

### Track

- Store a tamper-proof Certificate of Erasure for every IT asset erased.
- Automatically send erasure reports to the Blanco Management Console.
- Choose from a variety of report types including CSV, XML or PDF; send these to clients, or track internally.
- Achieve compliance with local, national and global data security and privacy regulations and guidelines.
