

# Introducing the Blancco SDK

## The Solution

Blancco's software development kit (SDK) for mobile diagnostics allows 3rd party apps, including network carriers, insurance, buyback, retailer and device support apps, to embed Blancco Diagnostics into their existing applications.

### Feature highlights:

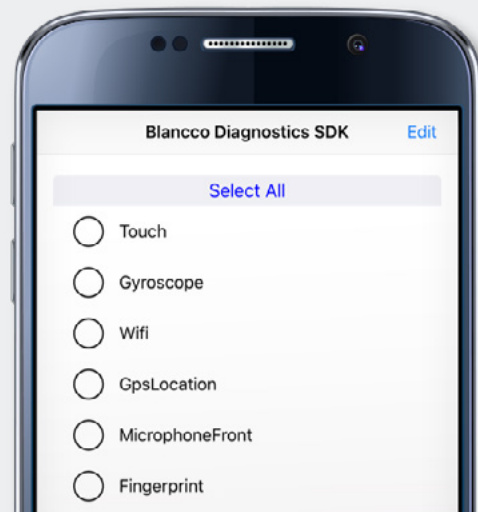

- Diagnose smartphone and tablet issues with 50+ diagnostic tests.
- Advanced tests – Identify battery and performance issues by performing stress tests.
- Keep your own UI and custom workflows for easy Blancco integration.

### Business Benefits:

- Reduce 'No Trouble Found' (NTF) returns to save your business money.
- Increase customer satisfaction.
- Leverage existing apps to diagnose customer issues.
- Reduce call center or store support costs by automating device support operations.
- Run the solution within an existing mobile app—no additional hardware costs.
- Experience ease of deployment. No separate app download necessary.

## How to Use Blancco SDK:

1. Embed Blancco SDK in your 3rd party app.
2. The end user of the 3rd party app initiates device test procedures.
3. The SDK allows the user to select which Blancco Mobile Diagnostics test(s) to run.
4. Blancco SDK runs the selected test(s).
5. The user receives a report detailing the results of the test(s).
